Subject
Arkland Winter Quarters/Wood's
Canyon Exploration Area - Goshawk
Status

Jeff - I received an email from Jeff Jewkes (USFS Manti-LaSal Biologist) regarding the status of the goshawk nests in the Wood's Canyon area. Their site assessment compliments our observations of no active nests within this portion of the exploration area. Let me know if I can assist you with anything, or provide any further explanation of work conducted this year for the wildlife clearances.

Thanks.

Subject: goshawk nests

David,

I think there was some mis-communication on these goshawk nests. We checked the Wood's Canyon territory and did not find any active nests.

It did look like one of the nests was tended this year. Because you did get

responses close to these nests and within this territory, our protocol states that

we need to document this as an occupied territory. So no nest buffer is needed

since there are no active nests.

Here are the UTM's for the Wood's Canyon nests:

Woods primary: 479996 X 4397802

Woods Alt A: 479578 X 4397900

Woods Alt B: 479538 X 4397828

Datum: Nad 83

If you have any further questions,
please let us know.

Jeff
